Aloha Airlines selects GEC for weighing Boeing 737-700 ETOPS

With the intent of validating passenger, bag and fuel weight on scheduled flights from San Diego to Honolulu, Aloha Airlines selected GEC to “prove out” dispatch/flight release accuracies for ETOPS Certification. The AN60-6 Low Profile, High Capacity Platform Weigher was selected in part due to its very low profile which negated passenger discomfort during pushback. Three scheduled flights during a two day period were weighed at the gate and all flights departed on time. GEC is the world leader in portable aircraft weighing equipment and is proud to have been a part of this successful project.
